**HOME AND BUSINESS
SOFTWARE**

POB 10306 Rockville, MD 20850

Schedule Manager

Software that truly meets the needs of a productive worker (businessperson, office employee, homemaker, student, etc.) is as scarce as proverbial hen's teeth for the T 994A user. The category of software that lets the user perform a task on a computer easier than by hand is almost nonexistent, with the exception of a few word-process spreadsheets, data-base programs, and utilities. That's why we at Asgard Software are particularly proud to introduce to you the newest addition to this very short list, SCHEDULE MANAGER. SCHEDULE MANAGER'S capabilities are impressive. It spots three major functions, that of a large appointment book, a useful calendar, and a handy notebook. All are integrated to a degree never before seen in T-994A programs. For example, data from one function can be passed to the others with a single command. Such power is not otherwise available on programs costing less than \$25. Power isn't everything...if a program is too difficult to use, it doesn't matter how powerful it is. That's why we made SCHEDULE MANAGER about the easiest to use 994A program in existence. It features complete pull-down menus and interactive windows straight from a certain well-known Apple computer, a powerful and extensive "HELP" utility for whenever you need help with any of the terms used in the program, numerous prompts presented in ENGLISH which mean what they say, and of course much, much more. Asgard Software didn't leave out usefulness either. The program over 16 different menu options for easily using and maintaining your information, ample storage space for most needs, a full-screen editor for entering data quickly and easily, multiple appointment book capability, complete print options, and assembly language speed. Overall, SCHEDULE MANAGER is excellent for keeping a weekly, monthly or quarterly schedule, keeping lists of names and phone numbers (among other things), and even maintaining a log of expenses. It's a worthwhile and affordable investment for any user. It requires Extended BASIC, a 32K memory expansion unit, a single disk drive. A printer is purely optional. SCHEDULE MANAGER can be obtained directly from us, or from your local Asgard Software dealer. Oh yes, it's unprotected too...

STAMP MANAGER

STAMP MANAGER is the ultimate organizing tool for the serious stamp collector! This remarkable program is the answer to the long hours of tedious required to maintain a complete catalog of a stamp collection by hand. This program won't take all the work out of it, nothing will (and don't trust anyone that says otherwise), but it does accomplish the task much quicker. Tests have shown that an experienced person using this program can finish the job five times faster than one using pencil and paper! Plus, the data can be easily updated and printed out over and over again on your own printer -- another advantage over pencil and paper. Moreover, this is a complete organizing tool -- the program is flexible enough so that each data file (called an "album") can be printed and sorted by Scott Number, quantity, value, date purchased, OR condition with assembly language speed. The program can accommodate any printer with any size carriage, and utilize special fonts or print features. The program is easy to use with full pull-down menus and prompts in English, not computer-ese. This program comes with a full 12 page manual explaining all the program functions and features. It requires Extended BASIC, a 32K memory expansion unit, disk drive and controller. A printer and RS232 is recommended but optional. Available for \$14.95.

The program can accommodate any printer with any size carriage, and utilize special fonts or print features. The program is easy to use with full pull-down menus and prompts in English, not computer-ese. This program comes with a full 12 page manual explaining all the program functions and features. It requires Extended BASIC, a 32K memory expansion unit, disk drive and controller. A printer and RS232 is recommended but optional. Available for \$14.95.

MUSIC SYNTHESIZER

A whole new concept in music creation for the TI-99/4A! This program was designed exclusively with the music novice in mind. It features easy to understand memes, easily recognizable symbols, and a simple but effective note placing method that a child can master almost instantly - and won't take an adult too much longer to learn. While lacking some of the features used only by advanced users or musicians, this program more than makes up for it with a raft of it's own. **MUSIC SYNTHESIZER** allows you to have total control over your creation. You can even save and merge pieces of songs at will to create entirely new compositions. You also get a very powerful and friendly note editor, a logical method for presenting notes and rests, and a powerful "play" command. This program gives the non-musically adept a whole new world within their computer! Requires a disk system, 32K memory expansion and Extended BASIC. Available for only \$10.95.

SCREEN SCROLL PCKG

The **SCREEN SCROLL PACKAGE** is ideal for the Extended BASIC programmer that wants to add some of the speed & pizzazz of assembly language to their programs simply and easily. This comprehensive package contains 11 assembly language routines designed for use through Extended BASIC that scroll the screen in any of four directions. Each specialized routine is optimized for speed and performance. Each is fully described in the program documentation, and the source code is all available for inspection on diskette. The routines in this package lend themselves readily to games, business programs and utilities, to name a few of the many possible uses. Asgard Software has also included free of charge a fine collection of public domain assembly routines and demonstration programs for each. A demo of SSP is also provided. Requires Extended BASIC, 32K and a disk system. A value at only \$10.00.

Disk Data Base

Today there are more programs available for the TI-99/4A than ever before. There are so many that yesterday's best disk cataloging programs just can't keep up. How many user's groups and individuals around the world can boast libraries in the thousands? The numbers are staggering, and until DISK DATA BASE, there was no way of easily keeping track of such an enormous amount of data. **DISK DATA BASE** is the only program you will ever need for organizing your disk library. Whether you have 100 or 10,000 files in your collection (DDB will store a catalog of up to 12,000 files on a single DSDD disk!), **DISK DATA BASE** is your tool for organization. **DISK DATA BASE** has more features than any of it's ancient competitors. With DDB you can now sort and print out your catalog by either diskname or filename., print it out unsorted, or selectively print out all entries that contain a string you enter (for instance, you can have it print out all your files named "LOAD"). You can also break up your catalog into blocks of 250 entries for easy management - no longer will you have to print out parts of a catalog you don't need. You can even convert data files from Master Disk File to DDB's data format, so your investment in time is saved! **DISK DATA BASE** features assembly language routines for speedy sorts and snappy screens, a helpful on-line dictionary of terms for when you are confused, numerous prompts in English, and more ease-of-use than you can shake a stick at. Even if you only have a small collection, DDB is the program for you. Not only will it let you be organized from the start, DDB will also let you expand database files to fill new disk capacity. So if you upgrade your disk drives or controller, DDB will let you easily enlarge your database disk so it can handle a larger catalog. A more flexible program for maintaining your program collection doesn't exist! **DISK DATA BASE** requires Extended BASIC, a 32K memory expansion unit, and a disk drive and controller. A printer and second drive are recommended, but not required. **DISK DATA BASE** is an excellent value at \$15 - not only does it include 3 disks and a eight page manual, it also comes unprotected so you can legally back up your investment. No data monster is too large to be tamed by DDB, so isn't it time you tamed yours?

T.O.D. EDITOR

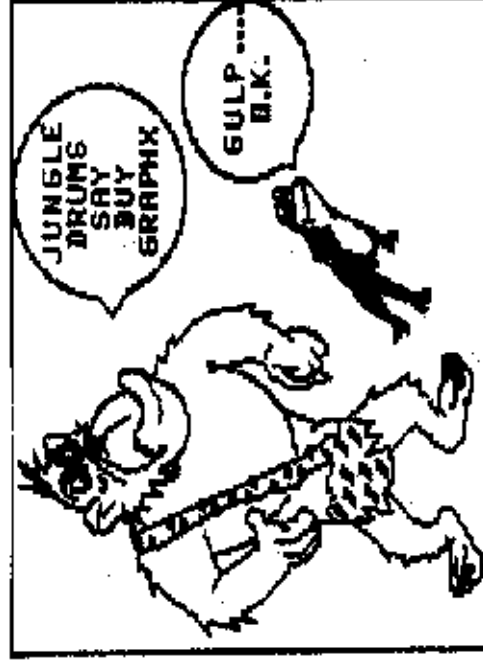

Now, create your own custom games for the Tunnels of Doom cartridge! The Tunnels of Doom cartridge is perhaps the best adventure TI ever produced, with it's three-dimensional graphics and dungeon-like setting. It is comparable to programs for other computers costing many times more. However, Texas Instruments made no provision for new games. Now with the T.O.D. Editor from ASCARD SOFTWARE, even non-programmers can create exciting new quests for themselves or their friends! The user of this completely menu-oriented program is not required to learn a complex language to create challenging and intriguing games for entertainment or profit. ASCARD SOFTWARE even offers purchasers free market research and game evaluation of programs created with this utility. You too can have you game known to the thousands of Tunnels of Doom enthusiasts around the world! This package includes a sample game made with this utility that can be played right out of the box, two disks, and an extensive user manual that explains all the features of the program, as well as offers suggestions for making your own game. The program requires Extended BASIC, a 32K memory expansion device, and a disk drive and controller. Additionally, the Tunnels of Doom cartridge by Texas Instruments Inc. is required to utilize the sample game, and all other games made with this program. Suggested retail price is \$20.00. Written by John Behnke, the author of over four games for the Tunnels of Doom cartridge!

The Volcano Fortress

ASCARD SOFTWARE is pleased to present a new quest for the Tunnels of Doom in the best tradition of this classic module - The Volcano Fortress. This outstanding quest, by John Behnke (the author of T.O.D. Editor) will appeal to both the hardcore fan and the casual player of the Tunnels of Doom cartridge. Explore this evil fortress for hidden treasures, but watch for unknown monsters! Includes extensive game documentation. Requires the Tunnels of Doom cartridge by Texas Instruments Inc., and a disk drive and controller. Only \$8.00

GRAPHX Companion

GRAPHX Companion is a revolutionary new addition to that most revolutionary graphics system, GRAPHX. This two disk collection is an excellent source of new fonts, clipart, pictures and animation sequences for use with GRAPHX. No longer will you have to design new graphics to suit your personal or commercial needs - GRAPHX Companion provides you with a large new source of material. Enhance and decorate your existing art work as well. User's may freely incorporate art in this package in their own works if notice is provided as to the origin. GRAPHX Companion is the tool for the casual or business user of GRAPHX. Make your computer system state of the art. If you don't already have GRAPHX by purchasing it from us! GRAPHX Companion has a suggested retail price of \$7.00. Now, obtain both GRAPHX (suggested retail of \$50) and GRAPHX Companion for an extraordinary low price of \$45!! GRAPHX requires Extended BASIC, or the Editor/Assembler cartridge, a memory expansion unit, a disk drive and controller, and an Epson compatible printer. GRAPHX Companion requires GRAPHX.

BALLOON WARS

BALLOON WARS is singularly unique among TI-99/4A games. There is no game like it on any computer! It is one of the first programs that can truly be called a strategy/arcade game. You are in command of a balloon and your mission is to cross 30 screens of hostile enemy territory to reach your base camp in the desert. It's not that simple though. You have to fight leaks in your balloon, limited supplies, and enemy troops on the ground that would like nothing better than to shoot you down and capture you. You can't just stay in the air though, you need to replenish your fuel and sand bags all the time. This game requires strategy, skill and a measure of good luck. With three levels of difficulty, the challenge never ceases! Requires Extended BASIC, 32K and disk system. Only \$9.95

MISCELLANEOUS

ANNOUNCING: As a service to individuals and user's groups, Asgard Software is distributing free of charge copies of the Public Domain Music packages described in previous issues of this catalog. This software may be freely duplicated by any and all. To receive this package, send 6 initialized SS/SD diskettes (must be six), and \$5.00 to cover duplication costs of both the diskettes and documentation, as well as return first class postage. Disks sent without the fee will not be returned until the fee is sent.

ASGARD LIGHT PEN: This high-quality photo-receptor device is the ideal alternative input device for games, utilities and educational program. This device attaches through the joystick port, can be used with the unexpanded system, and can be accessed through BASIC, Extended BASIC, UCSD Pascal, or any language that utilizes the joystick. Includes two-page documentation detailing it's use, four sample programs on diskette, and a 90 day money back guarantee that you will be satisfied. Only \$21.00. Device and software by Robert Emsel.

COMING SOON...

MISSILE WARS: An excellent new game by John Behrke. You would never guess that it doesn't require the expansion box - only Extended BASIC! Can you survive? A value at only \$9.00 (Availability by April 1, 1986)

THE HAUNTED MINE II: A fascinating new game by the master of games himself - John Behrke! Combines all the best features of a frantic arcade game with skill and cunning to create a game you will play for hours on end. Combines assembly language and Extended BASIC to best effect. Literally the best new game in years! Only \$10.00.

POWERFUL HOME AND BUSINESS SOFTWARE

NEW! THREE FROM ASGARD...

Artist Companion

Now, from the makers of the mighty acclaimed GRAPHIX Companion (see review in the Sept. '85 issue of MICROpendium) a companion product for the latest advance in 99/4A graphics, TI-Artist. All others aside, only our companion features art work from some of the best artists in the TI-99/4A world - Warren Agat, Chris Bobbitt, and many more (see craftsmen). Only our companion features not only the best art for GRAPHIX (including the winner of the MICROpendium graphics contest) but also a collection of all new art work designed specifically for TI Artist. Finally, our companion is also the least expensive available, only \$7.00 for a two-disk package. Requires TI-Artist Version 2.0.

\$7.00

Recipe Writer

Now available, the ultimate kitchen aid for the TI-99/4A! This useful utility for home-maker and chef alike is written entirely in the Forth language. Not only is it blindingly fast, it is also easy-to use with one-touch menus and full prompts in English, not computer-ese. Its many powerful functions allow easy recipe entry and editing, printout and organization. Included are options for easily converting recipes to different serving sizes, and for printing stored recipes on index cards as well as regular paper. Ideal for maintaining a collection of recipes without messy, unorganized pen and paper! Requires Extended BASIC, 32K and a disk drive.

\$12.00

Quick Dialer

At last, an easy-to-use automatic telephone dialing program designed for use with popular terminal emulator programs such as FAST-TERM and P-TERM! Store up to 100 names and numbers in a single directory file for dialing at the touch of a single key. Features automatic re-dialing if a number is busy, full name and number edit-lag options as well as complete print and display functions. The package includes a pre-written version for use with FAST-TERM, an easily modified generic version for other TE programs, and extensive documentation. Great for use with Compuserve, Source, and local BBS systems. Requires Extended BASIC, 32K, disk and a modem.
